Contents

Information for freight forwarders and importers

- **New: IMP StatusRequest from type customs declarant with change of depository**

Information for carriers

- **Simplified entry of entry summary declaration data**

Scheduling overview

- **Summary of IMP relevant dates**

The newsletter 01/2019 provides information about changes and new functionalities in the Import Message Platform. The software changes for the IMP release 8.0.0 become active with the maintenance work during the night of 9.01.2019. The software changes described below do not affect existing interfaces.

Information and implementation guides can be found at <http://www.imp-hamburg.de>.
The application IMP-Direct can be reached at <http://www.imp-direct.de>.

A complete inventory of fixed bugs and smaller enhancements can be found in the release-notes via IMP-Direct, which can be found in the menu “Help/Release-Notes”

Information for freight forwarders and importers

- **New: IMP StatusRequest from type customs declarant with change of depository**

Within a StatusRequest from type “Declarant” or “Combined” it is now also possible to initiate a change of depository for the own EORI. The change of depository is taken out in case of a StatusRequest labelled accordingly, after the terminal has taken over custody.

The function in this form is provided for participants using the customs system ZODIAK. If you use another customs product and have any questions concerning the automatic change of depository, please get in touch with your software service provider.

Technical details concerning the interface can be found within the implementation manual StatusRequest.

Information for carriers

▪ Simplified entry of entry summary declaration data

If all positions in the manifest are labelled with the same summary declaration MRN (or all positions are exempted from specifying a MRN in case of an OESUMA), the entry can be simplified by using the function “MRN data for all positions”.

Image 1 – simplified summary declaration data entry

Once the function was activated (cf. image above), the entry on position level is deactivated (cf. image 10).

Image 2 – Position dialog – Summary declaration entry deactivated

If the function is deactivated (image 11) the entries can be specified in the position dialog as usual (image 12).

Newsletter No. 01/2019

8th January 2019

Image 4 – Position dialog – Summary declaration entry activated

If one of the three fields in the simplified entry mask is changed, the changed data is transferred into all positions, each depending on the changes.

If the previous “ESUMA“ has been selected, the entry “MRN position number“ will be activated with the following options:

1. Please select!
2. own specification
3. start with 1 and in uninterrupted succession
4. set every position number to 1

In the field “own specification” the position number in the position dialog has to be specified by the user itself.

If you choose the option “start with 1 and in uninterrupted section“, the position number of the MRN will equal the position number. If a position is added or deleted, all MRN position numbers will also be enumerated again. (like the position number). The position 1 is consistent with the MRN position number 1, position 2 with MRN position 2, etc.

If you choose the option “set every position to 1” each MRN position number is 1.

Comments:

1. If the function for the simplified entry is activated and the Excel upload function is used afterwards (see chapter above), all available summary declaration data will be overwritten! The same applies vice versa: the summary declaration function overwrites the Excel upload data.
2. If the function is used, the summary declaration data in the positions will be overwritten without prior notice and the overwritten data cannot be retrieved.

Scheduling overview

▪ Summary of IMP relevant dates

Description	Test environment	Productive
Maintenance works IMP (release 8.1.0)		05.02.2019
Maintenance works IMP (release 8.2.0)		05.03.2019
