

ZAPP-Circular no. 50

Content

1. Introduction of the re-export control system (WKS)

With the ZAPP Circular no. 50 we would like to inform you about the rollout start for the new EMP status information.

1. EMP Status Information replaces ZAPP@Status

ZAPP@Status will be deactivated at the end of March 2025.

The function will be covered by the Status Information of the Export Management Platform (EMP) (<https://emp.dakosy.de>) in the future.

Register your company now for the usage of the EMP Status Information.

We need the following information from your DAKOSY contact person:

- Participant code to be activated in EMP
- First name, name and business e-mail address of the person in your company supposed to be responsible for the user maintenance in the EMP application.

Please send this information with reference „Registrierung EMP Statusauskunft“ (Registration EMP Status Information) to servicedesk@dakosy.de.

You can already use the new Status Request before login into EMP (<https://emp.dakosy.de/public/customsstatus>).
