ZAPP-Circular no. 51

Content

1.   Revised documentation of EMP Port Order XML interface

With the ZAPP Circular no. 51 we would like to inform you about the publishing of the revised documentation of our Port Order XML interface.

1. Revised documentation of EMP Port Order XML interface

We published the revised documentation of the Port Order XML interface on our website.

The Port Order XML interface replaces the current interfaces HDS, GM01 and GPO.

The documentation consist of the interface descriptions for

1. Port Order XML – the message for all processes currently sent via HDS, GM01 or GPO.
2. Port Order Cancellation XML (new) – a simple message for the Port Order Cancellation (in case of AES declarations also with the possibility for cancellationat exit)
3. Status XML – the message for all status and error reports concerning the Port Order
4. Cancellation at Exit XML – the message for cancelling a MRN at exit after the corresponding Port Order has been cancelled.

In addition we created several schema guides concerning the various declaration types. Message examples can be found in a separate ZIP file.

In case of open questions concenring the interface documentation you can reach our support team via servicedesk@dakosy.de.
