

ZODIAK EMCS

Required for the transport
of excisable goods

The IT procedure EMCS (Excise Movement and Control System) is required when excisable goods are to be transported under duty suspension (energy products, spirits and alcohol-containing products, and tobacco products), with the exception of coffee and alcopops.

With **ZODIAK EMCS**, we offer you a solution that allows you to manage the process quickly and conveniently. The software creates a so-called "electronic administrative document" which can be used to electronically monitor the shipment on its way through Customs.

We offer both a **web app** and an **EDI platform** which you can combine or use as a stand-alone according to your needs. This means that an EMCS transport entered using the EDI platform can also be viewed and edited via the web application. Incoming messages, expiring timers and outgoing messages can also be tracked up-to-the-minute via the web application.

ZODIAK EMCS supports EU-wide procedures in Germany, the Netherlands, Belgium, the UK and Ireland. Additional country certifications can be developed based on customer needs.

Advantages at a glance

- > **Available as web and EDI solutions, which can be combined**
- > **Deployable in Germany, the Netherlands, Belgium, the UK and Ireland**
- > **Secure and cost-effective data exchange with Customs authorities, compliant with legal requirements for the transport of excisable goods**
- > **Up-to-the-minute status information throughout the entire process**
- > **Integration of master data**
- > **Maintenance and access to code lists**
- > **Print function**
- > **Emergency procedures**
- > **EDI interface to ATLAS via ZODIAK as well as to in-house customer IT systems**
