## 2 Introduction

This document describes the XML Message “EntrySummaryDeclaration”, which is used within the ZODIAK ICS2 XML Interface in order to send ENS declarations or amendments to DAKOSY.

DAKOSY would then convert the data into the format required by the shared trader interface (STI) and send it there.

**Note: Further Information regarding the ICS2 process and its specification can be found at the following site:**

[https://taxation-customs.ec.europa.eu/customs-4/customs-security/import-control-system-2-ics2-0/ics2-resources\\_en](https://taxation-customs.ec.europa.eu/customs-4/customs-security/import-control-system-2-ics2-0/ics2-resources_en)

### 3 Data within the Entry Summary Declaration (ENS)

This document describes one of the messages used with ZODIAK ICS2 to send the Entry Summary Declaration or Entry Summary Declaration Amendment to the shared trader interface (STI).

In general, there are two reasons for an amendment of the original ENS filing:

- An issued Request for additional information (RFI) of type AMD requesting the amendment of an ENS filing's particulars or
- Due to a need for amendment identified by the person filing itself. This case will in particular be relevant when data for a given consignment was originally incorrect or changed after the submission of the original ENS filing.

When the amendment was requested by the customs authorities via an RFI, the referral request reference has to be inserted in the respective amendment message. Else, the amendment will not be recognized as an answer to the original request by ICS2.

For more RFI details please see document "ICS2 Pre-arrival referral guidance" available under:  
<https://circabc.europa.eu/ui/group/617eb8f3-5946-4fe5-a01f-42974a83b29c/library/26bd373e-44b7-41bd-9af0-96aec7227f74?p=1&n=10&sort=modified DESC>

There are certain differences between the “original” and the Amendment. These are described in the following sections:

#### 3.1 Differences/Specifics regarding “Original” and Amendment message

- **Update Flag:** When using the XML message EntrySummaryDeclaration (ENS), the element <MessageFunction> must have the value “UPDATE”. If the value is “ORIGINAL”, ZODIAK ICS2 will reject the message, when a MRN has already been issued.
- **Local Reference Number:** The Local Reference Number (LRN) is a reference assigned by the declarant, which should allow the declarant to link a declaration to data in his own IT system. Since Arrival Notices can be done in different ways while the ENS declaration usually will be done on shipment level, the Local Reference Number of the Arrival Notice will be different from the ones of the Entry Summary Declaration. However, changing the Local Reference of an Entry Summary Declaration with an Amendment is not possible. In addition, the LRN has to be unique per customer, i.e. it is not possible to send the same LRN twice, even for different countries / entry ports.
- **MRN:** When sending an ENS Amendment, the message must contain the MRN assigned by customs to the “original” ENS declaration. I.e. it is not possible to update an ENS declaration before it is confirmed by customs.

#### 3.2 Rules regarding amendments

Amendment of an ENS filing lodged via an update replaces the previous version of the ENS filing. This means, that an amendment must always contain the complete data, not only the information that has been changed.

ENS filings of type F25 shall not be amended, as this filing contains the information (Transport document (Master level)) that has to be unique and cannot be amended.

The following is an excerpt from a document posted on the EU web site:  
<https://circabc.europa.eu/ui/group/ea5f882b-9153-4fc1-9394-54ac8fe9149a/library/2397633f-b133-4c31-9134-eae4facf67a9/details>:

Below tables summarise the data elements, which are non-amendable per ENS filing type. But beforehand the most crucial four rules for sea freight and complete ENS air freight messages:

1. It's ok to remove a house consignment (house BL). For example in message F11.
2. To add a house consignment (house BL) is not allowed. For example in message F11.
3. To add or remove a Goods Item (GID) is not allowed. For example in messages F10/F13 or F11/F12.
4. To change the BL number or House BL number is not allowed. For example in messages F10/F13 or F11/F12.

**The data elements which are not allowed to be amended are the following, per ENS filing type.**

<b>Data element</b>	<b>ENS filing type</b>						
	F1 0	F1 1	F1 2	F1 3	F1 4	F1 5	F1 6
..../Specific circumstance indicator	X	X	X	X	X	X	X
..../Addressed Member State					X	X	X
..../Representative	X	X	X	X	X	X	X
..../Representative / Identification number	X	X	X	X	X	X	X
..../Active border transport means / Identity	X	X	X	X			
..../Active border transport means / Mode of transport	X	X	X	X	X	X	
..../ Active border transport means / Conveyance reference number

..../Customs office of first entry / Reference number	X	X			X	X	X	X				X	X	X

### 3.3 Cancellation (Invalidation)

To cancel an ENS filing you simply have to send “CANCELLATION” in the element <MessageFunction>. Only the MRN will be used to find the correct filing and the rest of the message will be ignored. This means you can send the original filing or an empty filing containing only the MRN, the Declarant and the COFE or the addressed member state and ZODIAK ICS2 will determine the filing by using the data provided.

Cancellation of ENS filings are possible until either:

- The goods covered by the ENS filing to be cancelled have been presented to customs, or
- Where the customs office has already notified a control for the goods covered by the ENS filing to be cancelled.

### 3.4 Filing type identification

As can be seen in the tables above, there are quite a few different messages that can be sent to the STI to apply for an MRN. To determine which message is the best fit, ZODIAK ICS2 needs either the actual type of filing in the element <SpecificCircumstanceIndicator> or a combination of the elements <ProcessPhase> and <DatasetIndicator>. The preferred method is by giving the filing type.

### 3.5 Filing types and combinations

Our XML interface is applicable for all ENS messages from IE3F10 to IE3F51 and IE3A10 to IE3A44. Below a short description of the possible ICS2 ENS messages for AIR freight and SEA freight. Postal, Rail and Road messages are also possible with our XML interface. For further information about the messages, their uses cases and possible message workflows please also check the official ICS2 Operational Guidance referenced in the chapter below or contact us.

#### Messages for air freight (ICS2 release 2)

##### Complete ENS:

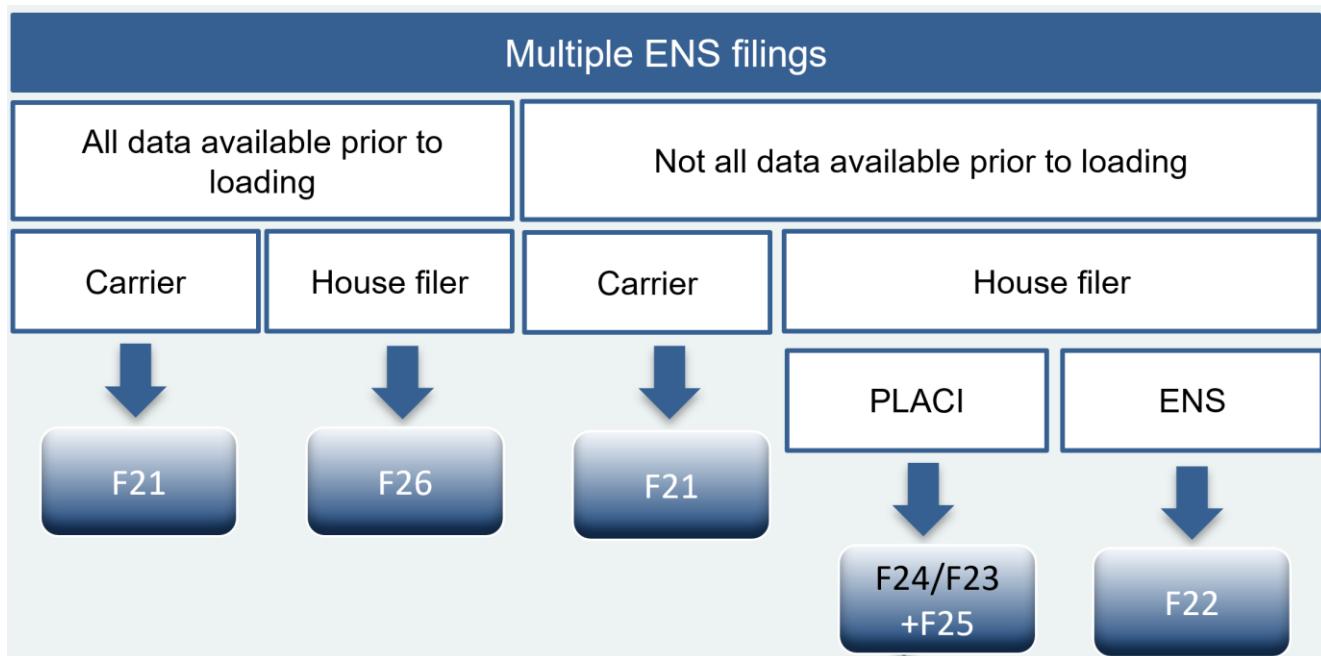

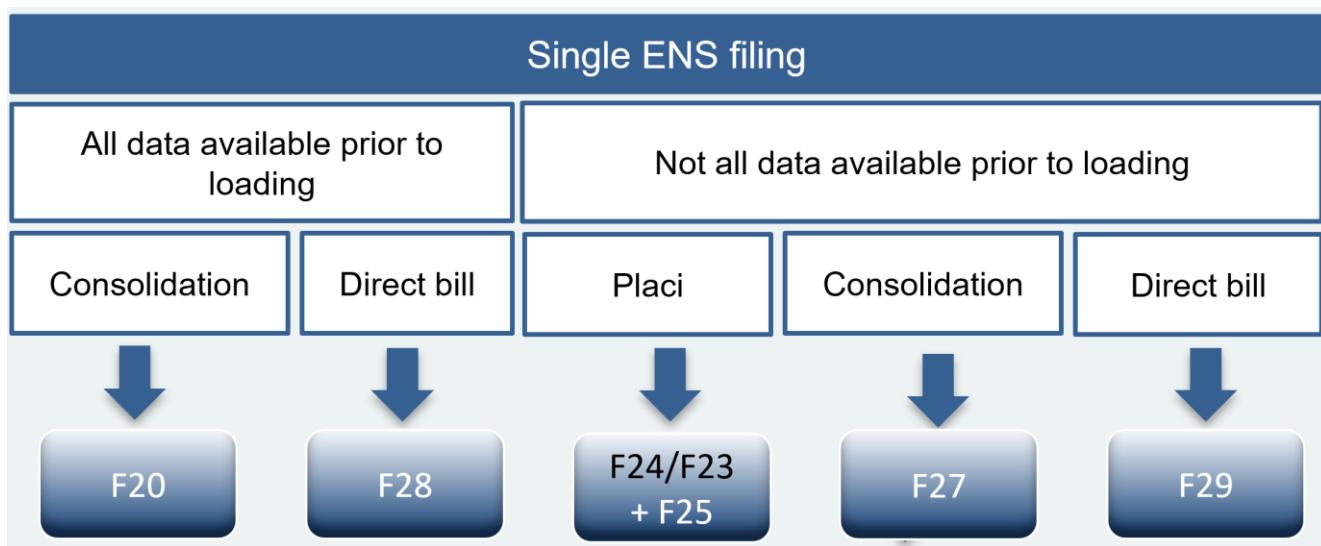

- F20: Complete dataset lodged pre-loading and pre-arrival but no PLACI (Consol)
- F27: Complete dataset lodged pre-arrival (Consol)
- F28: Complete dataset lodged pre-loading and pre-arrival but no PLACI. Direct air waybill (Non-Consol).
- F29: Complete dataset lodged pre-arrival – Direct air waybill (Non-Consol)

##### Multiple Filing (Partial dataset):

- F21: Master air waybill lodged pre-arrival
- F22: House air waybill lodged pre-arrival
- F23: Minimum dataset lodged pre-loading without master air waybill reference number
- F24: Minimum dataset lodged pre-loading with house and master air waybill reference number
- F25: Master air waybill reference number lodged pre-loading
- F26: pre-loading, containing additional house air waybill information
- F42 – partial master level data set lodged in pre-arrival phase (postal consignments/air mail).

ENS filing combinations for air freight:

Please see graphics below and official EU “ICS2 Operational Guide”.

## **Messages for sea freight (ICS2 release 3)**

### **Complete ENS:**

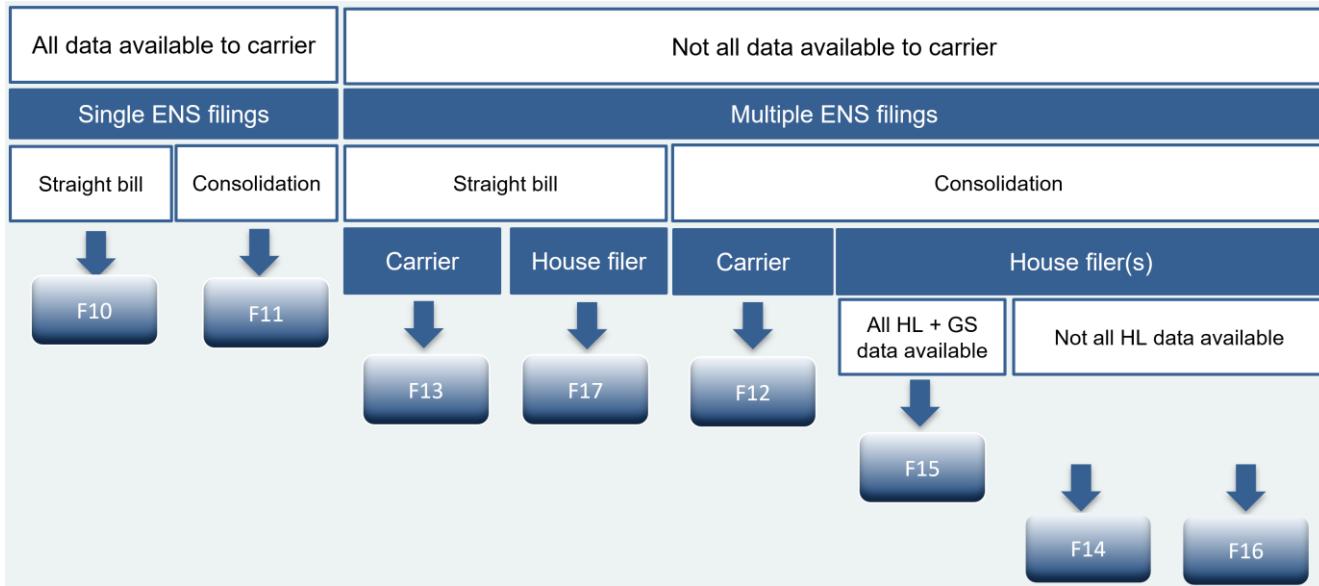

- F10: Is a complete Non-CONSOL ENS (Straight bill of lading).
- F11: Is a complete CONSOL ENS to send one master BL with several underlying house BLs.

### **Multiple Filing (Partial dataset):**

- F12: Is an incomplete CONSOL ENS (Master Bill of Lading). F12 is to send the part of the Master Bill of Lading (Consol) as a carrier without buyer and seller information. Carrier sends no House Level information.
- F13: Is an incomplete Non CONSOL ENS (Straight Bill of Lading). F13 is to send a so called Straight Bill of Lading (Non Consol) as a carrier without buyer and seller information.
- F14: The F14 message is an incomplete ENS (Consol). F14 is to send the part of the House Bill of Lading (Consol) as a house filing party or as a carrier. Without buyer and seller information. F14 can contain several house BLs and you need to send them all in one file.
- F15: Is an incomplete ENS (Consol). F15 is to send the part of the House Bill of Lading (Consol) with information about the consignee, buyer and seller as a house filing party.
- F16: Is an incomplete ENS (Consol). F16 is to send the part of the House Bill of Lading (Consol) with information about the buyer and seller as a house filing party. No cargo data included. In combination with F12 by carrier.
- F17: Is an incomplete ENS (Non Consol). IE3F17 is to send a so called Straight Bill of Lading (Non Consol) with information about the buyer and seller as a house filing party. No cargo data included. In combination with F13 by carrier.

### **Partial ENS filing combinations for sea freight:**

- F12 and F15
- F12, F14 and F16
- F13 and F17

HL = House Level

GS = Goods Shipment which stands for buyer and seller. In some cases House filer can't send buyer and seller, but House level data. So it's separated into F14 (HL cargo data) and F16 (buyer/seller).

The connection between carrier ENS and House filer ENS will be made by STI via the following elements:

Carrier, Transport Document Reference (MAWB/BL number), Supplementary declarant.

Regarding the Supplementary declarant, it needs to be set as follows for sea freight:

- Option 1: F13 + F17 (buyer/seller): F13 contains one supplementary declarant, which will send the F17.
- Option 2: F12 + F15 (HBL cargo data + buyer/seller): F12 contains one supplementary declarant which will send the F15. The F15 of the House Filer can contain also up to 99 supplementary declarants for the Sub-house filer. So F15 can be lodged either by one House Filer (set in F12) or by one House-Filer (set in F12) and several sub-house filers (set in F15).
- Option3: F12 + F14 (HBL cargo data) + F16 (buyer/seller): F12 contains one supplementary declarant which will send the F14. So, F14 can only be sent by one party. But F14 can contain up to 99 supplementary declarants, per house consignment. The F14 contains the supplementary declarant which will send the F16.

### 3.6 What is new in ICS2

#### Specific Circumstance Indicator:

The STI uses different messages for each use case. This means you have to send the specific use case you are using in this segment. Those use cases are based on the message names used by the STI (IE3Fxy). For every use case there is a message of name 'F' followed by a specific number in the range of 10 to 52, depending on the mode of transport and the data used.

Container Indicator indicates whether your goods are transported in a container.

Split Consignment Indicator is a new element to indicate that the consignment is a split consignment. The “Split consignment indicator” is a data element part of the ENS filings submitting the master transport information such as F10, F11, F12, F13, F27 etc.. It is a True/False field which is used for the cases when part of the cargo covered by a single ENS cannot be all loaded on the same air plane/vessel as initially planned.

Reentry Indicator is a new element, that will be mandatory in certain use cases. With this segment you indicate whether the goods you are transporting are re-entering the EU.

Transport Document needs to be filled with the Transport document, depending on the use case, you either need to send master or house or both.

Transport Charges - Method Of Payment: Segment will mandatory for most ENS message types. Here you are declaring which method will be used for paying the transport charges.

Active Border Transport Means element stays virtually the same as described in ICS1, only the “Type of means of Transport” has to be added. Additionally there is now Estimated date and time of Departure (Sea) and Actual date and time of Departure (Air and Sea).

#### Place of Acceptance:

Definition for Air freight: The place where the goods are accepted for the transportation. UN/LOCODE should be declared. Where UN/LOCODE does not exist, a name of location and a country code is provided.

Definition for Sea freight: Place where the person issuing the bill of lading takes delivery of the goods from the consignor. Similar to the former “Place of B/L issue”.

Place of Delivery is mandatory for the most ENS message types.

HS Code/Commodity Code: It's not new in ICS2 but now it's mandatory for all Non Natural persons. So it's mandatory for all companies. Except for messages F24 and F23, the HS code is an optional field.

Description of goods: It's not new in ICS2 but now it's mandatory.

Transport Equipment – Container Packed Status: for sea freight to indicate if a container is full or empty.

#### New parties in ICS2

Looking at involved parties, there have been some minor changes. There is the newly added declarant. The declarant is the party which is responsible for the ENS filing. Usually it's the carrier or the house filer.

Buyer and seller will be mandatory in message types F16/F17. In messages F10/F11/F15 they are mandatory, if the goods transported are destined for Europe. In other message types they are not used:

- The definition of buyer: "The buyer is the last known entity to whom the goods are sold or agreed to be sold. If the goods are to be imported otherwise than in pursuance of a purchase, the details of the owner of the goods shall be provided."
- The definition of seller: "The seller is the last known entity by whom the goods are sold or agreed to be sold to the buyer. If the goods are to be imported otherwise than in pursuance of a purchase, the details of the owner of the goods shall be provided.".

The supplementary declarant for multiple filing is mandatory in message of type F12, F21. In messages F13/14 it is mandatory if the goods are destined for Europe. In F15, F22, F26 it is optional.

If you have to set the party address you now have to give either the street and number or a p.o.box.

EORI numbers are required or at least strongly recommended for most parties. Especially for consignee. EORI is mandatory for consignee in EU, if company has an EORI.

Furthermore, the type of person (natural/legal/association) is a new field of parties like consignee, consignor, notify party, buyer, seller.

When sending amendments upon an RFI, further segments might become mandatory depending on the information requested by customs.

## 4 Official ICS2 documents and Code Lists

The information and documents linked below are outside the control of DAKOSY and subject to change, therefor the given links might not work or the versions mentioned might be replaced with newer versions.
